

# Observations and advices for the WPs

# General recommendations advisory board

- Agreement on terms – ensuring that everyone fully understands the key terms in each WP
- Deliver on the targets you have agreed on in the project plan
- (Further) establish the roles of WPs, particularly for avenues for working together on key issues, e.g. breeders and socio-economists to construct surveys or refine list of criteria
- Would be helpful to categorize the preferences (variety profiles) based on the following 4 criteria:
  - Agronomics of the crop
  - Processing and preparation of the crops
  - Sensorial profile and preference for products
  - Suitability for use and application in the context of consumers

# General recommendations advisory board 2

- Need for establishing clear and regular opportunities for communication and engagement across WPs
- Timely escalation to project coordinator of issues and opportunities for working more efficiently
- Clarify methodology for prioritization of criteria and traits
- Development of scenarios about how to adjust priorities along the project execution if required
- Focus quickly on 1 or 2 products and crops that have chance for success
- Consider a detailed SWOT analysis as a tool to take advantage of available competences and infrastructures in collaborations and prioritize efforts to build needed capacities
- Realize the importance of the annual report with respect to the structure and what was expected and what is achieved
